

Better Green Living

Improved Indoor Air Quality

Every home comes with a whole home MERV 6 air filtration system which reduces air pollutants, allergens and pollutant bacteria up to 99.9% as a **standard feature**

Water Efficiency

Every home is designed with an efficient whole house plumbing and landscape irrigation water system that conserves over 20,000 gallons of water every year as a **standard feature**

Low VOC Paints/ Carpets

Every home uses low or no Volatile Organic Compound interior materials (VOC) such as paints, finishes, carpets, lacquers, sealants and adhesives, making it easy to enjoy a breath of fresh air as a **standard feature**

Energy Monitoring and Control Systems

Every home comes with a Sunpower electronic monitoring system that lets the homeowner be in complete control of their energy usage either at home or remotely as a **standard feature**

Programmable Thermostat

Every home comes with an easy to read programmable thermostat. The easy to use features allow comfortable living while saving energy costs as a **standard feature**

Third Party Quality Inspections

Every home is inspected and certified by a third party quality control inspection company to assure compliance with building codes and building materials as a **standard feature**

Carbon Footprint/ Greenhouse Gases

Every home incorporates the use of recycled waste, lumber from sustainable forests, solar electric power, energy reducing technology and water conservation methods which all reduce greenhouse gases by up to 1.5 tons per home every year as a **standard feature**

Energy Star Appliances

Every home is equipped with Energy Star rated appliances that meet strict energy efficiency guidelines set by the EPA and the US Department of Energy as a **standard feature**
