

Real Homeowner Savings

Your Singleton Heights home has “built in” energy saving technology that saves up to **61%** in annual whole-house energy costs compared to a similar sized home built in 1990

(See Footnote)

Save up to an additional **20%** in electricity costs by using the real time SunPower home energy monitor that allows homeowners to make informed money saving decisions about the amount of electricity they are using

(Footnote)
ConSol HERS Score was determined using RESNET End-Uses: Heating, Cooling, Water Heating, Lighting, Large Appliances (Refrigerator and Dishwasher); MicroPas used to Calculate Heating, Cooling, Water Heating; Lighting calculated in Excel using BA (Building America) Benchmark assumptions; Appliances (Refrigerator and Dishwasher) used representative value estimated average of medium size appliance from EnergyStar website; Site Energy in kWh & Therms (gas/electric homes); MELs not considered. HERS Score includes Solar Generation using PV (Photovoltaic) Watts, Worst Case Complying Orientation (N, E, S, W) and/or Option used for calculation. The Energy Savings % was compared to a home built in 1990; Title-24 assumptions were taken from Vintage Table Values of the 2008 Residential Compliance Manual. Lighting calculated in Excel using BA (Building America) Benchmark assumptions; Appliances (Refrigerator and Dishwasher) used representative value estimated average of medium size appliance from EnergyStar website; Site Energy in kWh & Therms (gas/electric homes); MELs not considered.
